| 417096 | Spring 2019 | MISM 3115 | Examining the Decision-Making Support Systems Tools in Excel and its Use by Managers | This project will analyze the three decision-making tools in Excel which are goal seeking analysis, sensitivity analysis, and what-if analysis. These tools are used to manipulate variables such as units sold, cost per unit, and revenue to figure out how an organization can maximize profits. Dr. Li has suggested I use figures from AFLAC as a case study and propose solutions to the company on how they could have increased revenue between 2015 and 2016. |
