

Contract #	Term	Course	Contract Title	Description
421082	Summer 2019	BIOL 5257U	Biology of Aging: Diseases, Preventions and Lifestyles	I will be creating a PowerPoint slide show of how a particular lifestyle can contribute to health issue/illnesses late in life, particularly after the age of 65. Things to be included are information on the illness of choice, ways to care for the body early to prevent illness and possible injuries later, and effects of not doing activities that promote a long healthy life. In addition to the power point, I will also be required to create a handout to provide the viewers a condensed version of what my presentation is about.
422082	Summer 2019	BIOL 1125	Will the Earth Die Within Twelve Years?	Much has been said recently about Climate Change and the "Green New Deal." According to proponents of the Green New Deal, the earth will be uninhabitable within twelve years if radical action is not taken immediately. I propose researching this doomsday prediction to ascertain its validity and discover how serious the situation truly is. I will write a paper detailing my findings and how well they match the current claims.
